Product details

Flipper Zero is a tiny piece of hardware with a curious personality of a cyber-dolphin. It can interact with digital systems in real life and grow while you use it. Explore any kind of access control system, RFID, radio protocols, and debug hardware using GPIO pins. The idea of Flipper Zero is to combine all the hardware tools you'd need for exploration and development on the go. Flipper was inspired by pwnagotchi project, but unlike other DIY boards, Flipper is designed with the convenience of everyday usage in mind — it has a robust case, handy buttons, and shape, so there are no dirty PCBs or scratchy pins. Flipper turns your projects into a game, reminding you that development should always be fun.

What Does That Really Mean?

What can you do with a Flipper Zero?

Flipper Zero is a portable Tamagotchi-like multi-functional device developed for interaction with access control systems. The device is able to **read, copy, and emulate radio-frequency (RFID) tags, radio remotes, and digital access keys.**

What Can a Flipper Zero Really Do ?

What Are The Implications of This Device ?

- Charge Cards (can read and emulate)
- Hotel Room Door (can read and emulate)
- Employee Card (can read and emulate)
- Hotel Room Door > Hotel Safe (can enter the room & unlock safe if room card read)
- IFR (infra-red) Remote Control Devices
- Vehicle Access (Car Fobs)
- Electric Vehicle Charge Cards (charging stations)- can read and emulate
- Many Other Things (Bluetooth, USB)

Instructions On How To Read Cards

<https://docs.flipperzero.one/nfc/read>

Reading NFC cards

You can read, save, and emulate different types of NFC cards with your Flipper Zero. On this page, you will learn how to read and emulate NFC cards, the list of supported NFC cards and the algorithm behind the NFC Read function.

NFC functionality requires an inserted SD card

Flipper Zero stores databases on a microSD card, so please update your Flipper Zero firmware with a microSD card inserted before using the NFC feature. For more information about the update procedure, see the [firmware update](#) page.

Reading procedure

Reading process is automatic and doesn't require any manual configuration by the user. To read and save NFC card's data, do the following:

1. Go to **Main Menu** → **NFC**.
2. Press **Read**, then apply the card to Flipper Zero's back.

Don't move the card while reading. The reading process might take up to several minutes.

3. When reading is finished, go to **Menu** → **Save**.
4. Name the read card, then press **Save**.

Supported NFC cards

New types of NFC cards will be added to the list of supported cards. Flipper Zero supports the following NFC card type A (ISO 14443A):

- **Bank cards (EMV)** — only read UID, SAK, and ATQA without saving.
- **Unknown cards** — read (UID, SAK, ATQA) and emulate an UID.

For NFC card type B, type F, and type V, Flipper Zero is able to read an UID without saving it.

What Are People Saying About Flipper 0 ?

** The Flipper Zero - can talk to sub-1GHz devices like old garage doors, both Low- and High-Frequency RFID, NFC cards (near field communications), Infrared devices (remotes), and even Bluetooth.

** For instance, not only was I able to clone a building-entry card with Flipper Zero, I was able to record the signal that my neighbor's garage door opener makes when he pulls into his driveway.

** Hi, Just got my flipper and ran into an issue with one particular remote that seems to use a rolling code I believe.

** Awesome, now anyone can scam and rip off unsuspecting innocent people at the touch of a button! Who needs a card skimmer, when you can buy a Flipper Zero on Amazon. Hopefully people will learn to protect themselves and credit cards, cars, wifi, and all the other great things this hacking tool does.

How To Protect Yourself

- Charge Cards:
 - Use RFID Protector Sleeves
 - Purchase an RFID insulated purse or wallet
 - Don't give up your charge card (pay at exit time, walk to the cashier and pay, walk with the server)
 - Be aware of those around you / your surroundings (personal space)
- Hotel Room Keys
 - Use the same protection as charge cards
 - Use a "hard" combination to lock your safe. (Remember - There's always a master code).
- Garage Door Openers / Remotes
 - Be aware of people on the street (the remote transmits - how far away from your home does your door open)?
 - Rolling Codes or Encrypted Codes

How To Protect Yourself

- Car Fobs:
 - Always listen to ensure your car doors lock (beep-beep) when you park somewhere.
 - Lock your car doors using the internal rocker button (last person out).
